## Executive Summary

---

**Our vision is to optimize "WDA Token" utility for social connectivity.**

The primary characteristics of the WDA Utility Token cryptocurrency are introduced and outlined in this whitepaper. WDA Token is based on the Binance Smart Chain (BSC) and uses smart contract technology to give everyone unlimited access to our WAVE Dating app, by picking their interests and Wave on other individuals, users will be able to connect with new social groups. We've highlighted a few key ideas and technologies that are common to all cryptocurrencies so that this article may serve as a self-contained reference to WDA Token, even for readers who aren't familiar with cryptocurrencies in general.

## Introduction

---

Due to a lack of connection and a lack of understanding, 198 million Americans report feeling lonely at times or all of the time. Around 43% of people surveyed stated they feel disconnected from others. At least sometimes, if not often, 54 percent of Americans believe that no one knows them well. At least two out of every five people report feeling lonely on occasion, that their connections are meaningless, that they are alienated from others, and/or that they are no longer connected to anybody.

Online dating sector  
**Predicted Revenue**

**\$3,241 million**

The worldwide online dating services market is anticipated to reach \$9,202 million by 2025, growing at a CAGR of 4.7 percent between 2018 and 2025. Furthermore, by 2021, revenue from the Online Dating sector is predicted to reach \$3,241 million.

It may be difficult to fathom or recall, but going on a date with someone you met online used to be a bizarre and frowned-upon concept. According to a Statista poll from January 2018, 13% of 18-29-year-olds are dating or engaged to someone they met online. In reality, over 1,500 dating apps and websites are vying for single men and women to sign up for their services and be matched with one another.

WDA (BSC- ERC 20) Token is utilised in the WAVE dating app, which blends staking and app functionality while assisting in the eradication of loneliness by encouraging meaningful face-to-face human connections based on shared interests.

The crew has years of expertise in the dating and matching industries, so consumers can expect a smooth experience while looking for a meetup. By restoring trust, transparency, and eliminating the pain points and challenges that singles and couples encounter today, WAVE's embrace of cryptocurrencies will affect and alter the world's dating and relationship sector.

WAVE App's backend employs cutting-edge technology to detect and eliminate fraudulent or spam profiles, as well as abuse attempts. WAVE is designed to provide a safe and secure social networking platform that is both future-oriented and cost-effective.

Users of the WAVE platform will also have access to the following features: Swiping on other users' profiles to start free conversations purchasing subscriptions using fiat currencies as well as WDA Token (which comes with WAVE 2.0) or staking WDA token to receive perks and staking rewards.

WDA Token uses Binance Smart Chain and Artificial Intelligence technologies to create a worldwide decentralised registry that verifies identification. The verified individuals can then interact with other platform users who share their interests. Our fundamental answer has been to deliver happiness to individuals and couples who are suffering love, meet-ups, and relationship issues since our start.

Our system connects users with people and groups who have similar interests to them. We invite people to explore the WAVE Platform, which uses smart contracts to ensure that a user's profile is accurately represented through a verification procedure and extra information that provide incentives to users. The WDA token will be accessible for purchase straight through Wave.Dating/WDAToken and will have a hard cap of 1 trillion tokens.

## Online Dating/Meetup Industry

---

Since the advent of internet dating, top online dating sites and matching services have been using powerful algorithms to match millions of users from a sea of prospective matches. The technology of the sector, as well as its income, has reached new heights.

Online dating sector  
**Year 2020 Revenue**

**\$2.230 billion**

Experts revenue Prediction  
**by end of year 2025**

**\$3.592 billion**

During the period 2021-2024, the worldwide online dating services market is expected to expand by USD 2.01 billion, with a CAGR (compound annual growth rate) of 5%. Casual Dating, Matchmaking, Niche Dating, and Online Dating are all part of the Online Dating Services Market. Matchmaking accounted for the largest percentage of the Online Dating Services Market in 2019.

The online dating sector made \$2.23 billion in sales in the previous year, which exceeded many predictions. By the end of 2025, experts predict that the sector will generate \$3.592 billion in revenue.

## Cryptocurrency Market

---

Cryptocurrencies are payment systems that allow safe online payments by using virtual "tokens" defined by internal system ledger entries. Cryptographic techniques and tactics that safeguard these entries include elliptical curve encryption, public-private key pairs, and hashing functions.

The cryptocurrency industry continues to develop, with a market value of US\$ 1,859,506,384,332 as of March 30, 2021. (1.859 trillion dollars)

Following the debut of Bitcoin in January 2009, thousands other cryptocurrencies arose, with Bitcoin reigning supreme as the indisputable monarch of the industry, accounting for about 59.2 percent of total valuation.

According to the most current data from Statista, there are over 100 million active Bitcoin wallet users. Although it is practically impossible to estimate how many people use cryptocurrencies, current data indicates that at least 100 million wallets have been created, with 64 million active users. Several projects have developed services to make it easier for ordinary people to utilise cryptocurrencies on the blockchain. There are six major cryptocurrency business sectors today, despite the fact that there are many relevant individuals and businesses in the Bitcoin industry.

## Exchanges

---

Cryptocurrency exchanges are online platforms that allow users to trade cryptocurrency for other assets such as digital and fiat money. In fact, cryptocurrency exchanges work as intermediaries between buyers and sellers, collecting money through commissions and transaction fees.

## Wallets

---

Users may use cryptocurrency wallets to safely store and manage blockchain assets and coins. Users may receive and exchange bitcoin using these wallets. By employing strong passwords, these solutions ensure that only the owner of cryptocurrencies and blockchain assets has access to the cash. On smartphones and computers, cryptocurrency wallets may be browsed and accessed.

## Payments Companies

---

When a consumer pays with cryptocurrency, the transaction often goes via a payment gateway at a predetermined exchange rate and is quickly converted to a conventionally accepted fiat currency, allowing the merchant to escape the volatility of cryptocurrency markets. Some cryptocurrency payment gateways, on the other hand, do not convert cryptocurrency to fiat money right once, allowing merchants to keep the digital currencies in a cryptocurrency wallet for as long as they like.

## Mining

---

Cryptocurrency mining is the process of confirming and adding transactions between users to the blockchain public ledger. Mining also adds new coins to the current circulating supply, and it is one of the primary components that enables cryptocurrencies to operate as a peer-to-peer decentralised network without the need for a central authority.

## DEFI

---

DeFi is a sort of blockchain-based finance that relies on smart contracts on blockchains, the most popular of which is Ethereum, to supply traditional financial instruments instead of depending on central financial intermediaries like brokerages, exchanges, or banks. DeFi systems allow people to lend or borrow money from others, exchange cryptocurrencies, insure against threats, and earn interest on savings accounts.

## NFT

---

NFTs or non-fungible tokens, are cryptographic assets on the blockchain having unique identification codes and metadata that differentiate them from one another. They cannot be sold or traded for counterparts, unlike cryptocurrencies. This contrasts with fungible tokens, such as cryptocurrencies, which are comparable to one another and can thus be used as a means of exchange

## Blockchain Technology in WAVE DATING

---

The WAVE Dating platform's lightning-fast user design will be based on the Binance Smart Chain blockchain, which is very resistant to manipulation and fraud.

Binance Smart Chain is a blockchain platform with a comprehensive ecosystem for creating high-performance decentralised apps. They've been designed to be cross-chain interoperable, so users can have the best of both worlds.

While Blockchain technology is a game-changer in terms of digital recordkeeping in the form of ledger-based transactions, not all Blockchain solutions are created equal.

WAVE Dating raises the bar for dating/meetups by providing a slew of features that allow users to connect, communicate, and earn WDA Tokens (accessible with Wave 2.0) on a single platform.

After filling up your profile interests and describing the sort of relationship you want, WAVE allows users to establish their WAVE wallet, which allows them to earn cryptocurrency while swiping to their hearts' delight.

## Current Industry Challenge

---

In the previous 10 years, the dating app sector has gotten pretty crowded. Despite its saturation, it is a lucrative and rapidly expanding market. It's no wonder, therefore, that creative entrepreneurs and software developers are still coming up with new ways to solve the age-old problem of pairing.

## User Disengagement

---

About 37% of online dating users claim that after they said they weren't interested in communicating, other users on the dating site or app continued to contact them. Furthermore, around 35% of users claim that other users on a dating app sent them a sexually explicit message or photograph that they did not want. Nearly a third say they've been called a derogatory term, and around a tenth say they've been threatened physically.

## Inadequate Verification and Transparency

---

Lack of openness in relationships and marriages, owing to the lack of a global registration of partnerships and married status, is a major issue that is sometimes overlooked.

People have several relationships and marriages in other countries as a result of this, while their partners are kept in the dark or forced to accept the reality when the agony of leaving the relationship or marriage outweighs the suffering of staying. There is no publicly available global registration of relationship and marriage status that offers a restricted view of a person's relationship or married status. Marriage records are regional and kept in each country's registry. They aren't disseminated globally and aren't easily accessible to everyone. On the other hand, verifying that a person is not involved in numerous relationships at the same time is significantly more difficult.

## **Inadequate Mindset**

---

While a dangerous dating environment makes it difficult for singles to find love, a lack of the correct mentality and dating skills can also make it difficult for singles to find a compatible match. Some singles lack the correct mentality (e.g., they are extremely pessimistic, have emotional baggage), and others lack the necessary skill set (e.g., what to do on a date, how to advance from dates to a relationship). Singles must first understand what a suitable match is and how to be the right match before learning how to find their ideal mate. Having the appropriate mentality and skillset will help singles become better people with realistic expectations when it comes to finding love.

## **Unrealistic Expectations**

---

Most online daters have unrealistic expectations of someone who is, for all intents and purposes, a complete stranger on dating applications. Most users are unaware that some connection requests will most likely be ignored. This rejection might be difficult for some people, especially those who are easily offended.

## **Getting paired with the wrong people**

---

Going on the first date after the first date but never seeming to develop anything beyond that might be perplexing. The problem is typically caused by users' representations of themselves on dating apps.

Most users give false answers to inquiries about who they genuinely are on most dating applications. More importantly, several individuals neglected to define what they genuinely desire, mistaking themselves for someone searching for a good time when they were actually looking for something more serious. A excellent example of this is a consumer who sincerely wants to find love yet gives the impression of dating casually.

# Join us!

As we create a socially-driven cryptocurrency ecosystem.

WAVE aspires to give the world with a cryptocurrency that is simple to use, useful, and meaningful. On the platform, a cryptocurrency for dating/meetings and online commerce. A currency that can be used to pay for dating services and can also be used to generate money.

The AI-driven user on-boarding mechanism in our system verifies if a user is a real person and generates trade agreements. Singles may be certain that they are conversing with a genuine person, not a machine or a false user.

WDA token, on the other hand, has the ability to revolutionise the industry by allowing for dating through its utility token on the WAVE platform.

While the major purpose of the WAVE dating app is to connect users with new individuals, the safety of users must be addressed. We understand how thrilling it is to meet new individuals. Nonetheless, it has the potential to cause worry in people, especially those who have been subjected to harassment or other comparable problems in the past.

## How Does the WAVE Platform Work?

---

Create a WAVE profile. User uploads profile image of his or her face as a new user by just completing a bio.

- Users will be able to customise their profiles and hobbies.
- Find individuals who share your likes and interests and connect with them.
- Users may earn WDA Tokens by swiping on other users' photos  
(available with WAVE 2.0)
- Users who are connected can begin a chat.

## WAVE Features

---

The following is a list of WAVE's distinguishing traits.

1. Use FIAT/WDA Tokens to pay.

Users can subscribe to our premium services by paying in their home currency's FIAT currency or by staking WDA Tokens ( available with Wave 2.0)  
WAVE Wallet is unique to the user; each WAVE profile will have its own wallet in which WDA Tokens can be saved while utilising the app's premium features.

### **a. Earning potential**

While using the programme, users may earn WDA Tokens.

### **c. Establish a network**

Users will be able to obtain the premium subscription by staking WDA tokens and/or recommending friends using a unique referral code.

Pay (Options): Fiat currency / Staking (WDA Tokens)

Enroll: Creating a wallet Earn: Earning by staking

Engage: Taking earnings while enjoying the Wave App's Premium features

## 2. Gamification

WAVE promotes transparent and secure matching for all of our users. All significant exchanges were initially designed to provide completely secure transactions that are effectively protected from hackers.

We want to bring continual updates to the WAVE platform using a proven algorithm in order to stay ahead in innovation and technology while still being creative, allowing for higher work quality and an easier navigation experience.

## TOKEN STRUCTURE

---

To assure the project's long-term survival, a portion of each transaction is invested in its lifespan and stability:

The following text provides information on the WDA token, including use cases, benefits, and issuance terms.

### Issuance Terms

WAVE DATING tokens will be issued on all major exchanges using the ticker symbol "WDA."

**ISSUER:** Binance Smart Chain

**Token name:** WDA, a utility token with the ticker symbol "WDA"

**USER ELIGIBILITY:** Subject to completion of relevant KYC, Whitelisting and/or restrictions imposed by.

**LISTING:** WDA will be listed on major exchanges

Total  
Supply

1,000,000,000,000 Hard Cap

## Token Distribution

---

### About the initial allocation of WDA

Wave Token	Wave Token	Wave Token
Fair Launch Supply	40%	40,00,00,00,000
Gradually Destroy	10%	10,00,00,00,000
Burned Dev Token	50%	50,00,00,00,000
Marketing and Business Development	50%	50,00,00,00,000

## Tokenomics

---

### Token Economics

4% of all transaction fees are distributed to holders. You will see a wealth accumulation in your wallet at the minute you start holding.

- Unreleased (40%)
- Founder and team (20%)
- Outstanding Shares (20%)
- Other (20%)

# 10% total supply burn

WAVE is targeted to burned 10% total supply, with the plan as:

First  
**2%**

total supply will be burned when the app users/ coin holders reaches 1,000

Second  
**2%**

total supply will be burned when app users/ coin holders reaches 10,000

Third  
**2%**

total supply will be burned when app users/ coin holders reaches 100,000

Fourth  
**2%**

total supply will be burned when app users/ coin holders reaches 300,000

Fifth  
**0.5%**

total supply will be burned when app users/ coin holders reaches 350,000

Sixth  
**0.5%**

total supply will be burned when app users/ coin holders reaches 400,000

Seventh  
**0.5%**

total supply will be burned when app users/ coin holders reaches 450,000

Eighth  
**0.5%**

total supply & all dividends will be burned when app users/ coin holders reach 500,000

### Dead wallet Algorithm

The WAVE dead wallet owns over 30% of supply at launch. The WAVE dead wallet counts as one of the wallet holders that 4% of transactions are distributed to.

### Secure Auto-farming

4% of all transaction fees are distributed to holders. You will see a wealth accumulation in your wallet at the minute you start holding.

### Whale Proof

No wallet holds more than 4% of token supply and no transaction can involve more than 5 trillion tokens

### Liquidity Lock

Liquidity is locked in PancakeSwap and the ownership of the contract has been transferred to the burn address.

## WAVE Team

---

To begin, we gather a varied range of skills from huge corporations to start-ups, including high-tech, finance, online dating, and marketing professionals. Putting up a capable team is the most important step toward a better method to spend, save money, and enjoy a flawless online shopping experience.

We've assembled a seasoned management team with a wide range of talents and competencies. Among these expertise are bitcoin experts. Our professionals are also familiar with Blockchain and peer-to-peer technology, as well as payment processing, artificial intelligence, and cyber threat security management. WAVE has assembled the greatest staff to assist our new users in thriving as they collaborate with us, benefiting from a dependable, transparent, high-security platform and 24-hour assistance.

## Road Map

---

- |                                      |  |                               |
|--------------------------------------|--|-------------------------------|
| • ICO Live                           | • Scheduled burning - 3                | • Stake and earn              |
| • Token Launch                       | • Bounty Campaign                      | • Enable Wave+ with WDA Token |
| • Initiate Airdrops Phase 1          | • Scheduled burning - 4                | • Listing in WazirX           |
| • Initiate Airdrops Phase 2          | • Rewards Program for Presales         | • Scheduled burning – 7       |
| • Initiate Airdrops Phase 3          | • Introduce WAVE 2.0                   | • Listing in Binance          |
| • Listing in pancake swap            | • WAVE Wallet V1.0                     | • Scheduled burning – 8       |
| • WAVE Website Launch                | • Scheduled burning - 4                |                               |
| • Launch of Wave Dating App          | • Enabling Wave WDA Staking (WAVE 2.0) |                               |
| • Listing in coingecko               | • Launch Staking Opportunities         |                               |
| • Initiate Referral Programs         | • Scheduled burning – 5                |                               |
| • Scheduled burning - 1              | • Listing of major 5 exchanges         |                               |
| • Initiate WAVE Dating Marketing     | • Scheduled burning – 6                |                               |
| • Initiate WDA Large Scale Marketing | • Third Party Audit                    |                               |
| • Scheduled burning - 2              |  |                               |
| • Listing in coinmarketcap           |  |                               |

## Conclusion

---

WAVE Dating will be a decentralised community-based token that aims to alleviate loneliness by enhancing meaningful face-to-face human connections based on users' shared interests. WAVE allows users to easily meet and interact with others who share their interests.

We intend to keep our users active by combining the present decentralised system's processing power with novel technology, which is the WAVE Dating app and the WDA token, to provide speed, efficiency, security, and a fully functional user-controlled dating platform.

## Disclaimer

By receiving this document, the receiver accepts that any information included in it or related to the offering is confidential and nonpublic. The receiver also promises to keep all information confidential and not use it for personal gain (save in connection with the recipient's dating decisions). The recipient's nondisclosure duty, on the other hand, does not apply to such material that is already in the public domain. Any user should evaluate app usage based on independent evaluations of their financial situation and other relevant considerations in order to make an informed decision that does not rely entirely on the information supplied above.

We are not compensated for our evaluations, but we do take positions in ventures that we feel have potential. WAVE Dating makes no claims, warranties, or assurances for the correctness, currency, or completeness of the content on this website or any sites linked to or from it.

Token creation events and initial coin offerings are routinely targeted by hackers and bad actors. Hackers may attempt to disrupt the Purchaser's digital wallet (the "Purchaser's Wallet") or the availability of Tokens in a variety of methods, including denial of service attacks, spoofing, smurfing, malware attacks, or consensus-based attacks. As a result of such an assault, a Purchaser's Tokens may be stolen.

We are not rewarded for our assessments, but we do invest in enterprises that we believe have promise. WAVE Dating offers no representations, guarantees, or assurances about the accuracy, currency, or completeness of the information on this website or other sites connected to or from it.

Hackers and malicious actors often target token creation events and initial coin offers. Hackers may use a variety of tactics to disrupt the Purchaser's digital wallet (the "Purchaser's Wallet") or the availability of Tokens, including as denial of service attacks, spoofing, smurfing, malware assaults, or consensus-based attacks. A Purchaser's Tokens may be taken as a result of such an assault.

The token smart contract idea, as well as the underlying software programme and platform, are all in the early phases of development. There are no promises or representations that the Token production process will be error-free or continuous. There is an inherent risk that the programme will have flaws, weaknesses, or difficulties, resulting in the complete loss of the Tokens, among other things.

Failure of hardware, software, and internet connections are only a few of the risks associated with using Tokens. The Company is not liable for any communication failures, disruptions, errors, distortions, or delays that occur when using the WAVE Dating App Platform and Tokens, regardless of the cause. Losses suffered as a consequence of fraudulent or unintentional transactions may not be recovered since bitcoin transactions are potentially irreversible. Cryptocurrency transactions are regarded complete when they are recorded on a public ledger, which is not necessarily the same as when they are begun.

**Blockchain transactions are irreversible.**

Token transactions that have been confirmed and published as a blockchain block are typically irreversible. Even if the transaction was made in mistake or as a result of the theft of a user's Tokens, it is irrevocable. Furthermore, there is no governmental, regulatory, investigative, or prosecutorial authority or mechanism in place to report a missing or stolen bitcoin or digital token. As a result, the Company may be unable to restore lost Tokens or seek restitution for any erroneous Token transfers or thefts.
